

3D Modeling

For this assignment you will learn to use Sketchup, which is 3 dimension modeling software. Once you've learned to use Sketchup you will make a 3d model of a chair. You will need to use one of the Macintosh computers in the classroom. You have 2 days to complete the assignment.

Follow the steps below to complete the assignment.

- Access and watch the first (not the second) video tutorial at <http://cvmstech.weebly.com/weeks-7--8-feb-12---23.html> (click on the link after reading the directions) The video will be the top video near the bottom of the page. You may pause the video anytime you like and try out the tools you've learned about. You may take the Chromebook with you to the Macintosh computer workstation so you can watch more of the video, or replay part of the video as needed.
- At the Macintosh computer click on Students. There is no password required so just press enter or return.
- Find and click on the Sketchup icon (it's red) in the dock. You can also access Sketchup from the applications folder in the dock.
- Click on the button that says Choose Template.
- Choose Simple Template, Feet and Inches.
- Click Start Using Sketchup.
- If Sketchup is already open and nothing happens after you click the Sketchup icon, go to the file menu and click new. This will open a new drawing window for you.

On the second day you will need to start on your assignment, which is to draw a chair. Take a look at the video <http://cvmstech.weebly.com/weeks-7--8-feb-12---23.html> (click on the link after reading the directions) for specific directions of how to complete your assignment. The video will be at the very bottom of the page. You may have the video open and pause or replay as needed while making your drawing.

- **When you've completed your drawing call me over to check it off.** You may then draw something of your choosing if you have time.
